Barn Door Hardware Checklist

Check a sliding barn door hardware kit piece by piece before you buy.

The track

- [ ] Track material noted (steel grade and thickness): _____
- [ ] Track length is at least twice the door width
- [ ] Track rated for your door's weight: _____ kg / lb

Rollers and movement

- [ ] Rollers run on ball bearings, not plain plastic wheels
- [ ] Roller straps suit your door thickness: _____
- [ ] Soft-close mechanism included or available for this kit

Mounting

- [ ] Mounting type decided: wall mount or header mount
- [ ] Anchors and lag bolts included, sized for your wall type
- [ ] A header board is planned if the studs do not line up

The final check

- [ ] Kit meets Grade 1 or Grade 2 durability standards
- [ ] Door weight + hardware weight is inside the kit's rating
- [ ] Floor guide included so the door cannot swing out

> Ensure your chosen kit meets the durability standard before you buy — it is far cheaper to check this list now than to rehang a door later.
