Front-Door Measurement Worksheet

Record these measurements before you compare or order any front door.

Measure the door you have, not the size on an old label. Write every figure down here and take this sheet with you when you compare products.

Your measurements

Slab width:

Slab height:

Frame dimensions (outside):

Rough opening (width x height):

Wall thickness:

Jamb depth:

Swing direction (in or out, left or right hand):

Threshold height and type:

Clear width once the door is open:

Notes

> Measure width in three places (top, middle, bottom) and write the smallest figure — old frames are rarely square. Do the same for height on both sides.
